

AMENDMENTS TO THE SPECIFICATION

Due to numerous typographical errors that occurred during translation of the Swedish priority applications and preparation of the original PCT application (i.e., adding an “A” after the majority of the reference numbers in the Specification), a Substitute Specification has been prepared and is attached hereto. The Substitute Specification conforms the Specification to the Drawings. A “marked-up” version of the Specification is also provided as an attachment.

No new matter is involved with any Specification amendment or with the Substitute Specification.
